CERAMICS

The founders of Element Accessories (Spain, Finland, Belgium) have backgrounds in industrial design, interior architecture and product development, as well in Europe as in China. It is their passion for materials, design and quality that brought them together.

Element Accessories' designs are a mix of European styles, classic and modern, sometimes with a Asian accent.

Earth is one of the world's 4 basic elements. It's from the earth we get the clay to make ceramics. Selecting good clay is a first very important step of the long manufacturing process.

The form is achieved either fully by hand, often turned on a banding wheel, a very skillful craft; or via the use of molds, which also requires a lot of hand labor to apply the clay thoroughly and cut off the edges, one piece at the time.

CERAMICS 2021 GLOSSARY

I. Standard Ceramics

II. 3D-printed

III. Hand Turned

IV. Mandarin Oriental

The capacity and control of maximum temperatures of the furnaces are also very determining to achieve a perfect result. The clay is baked several times at a specific temperature, it makes the pots strong, the color consistent and the finish in the right texture.
